CHUANGO SMK-500

Smoke detector - Wireless - Internal antenna - Built-in siren - Detection range 20 m² - Power supply 1 battery 9 V

Photoelectric smoke detector, which operates by detecting smoke particles in the environment. Thanks to its special design and photoelectric signal processing, it prevents false positives by dust or other interference, focusing on the detection of smoke caused by visible or hidden fire.

When it detects smoke, it will send an alert to the panel that will trigger the alarm. But furthermore, it has a built-in siren that will sound at the same time of detection, causing the first warning. It is widely used in homes, shops, hotels and offices.

- - Simple installation on the ceiling, compact and aesthetic design
- - Wireless connection 433 MHz with the panel with a maximum reach of 100 m
- - Automatic restart after alarm and when the concentration of smoke disappears
- - Internal high power siren: 85 dB/m
- - Low battery warning system, the detector itself will warn you when the battery is low
- - Photoelectric, smoke enters the detector and scatters the light of an LED, stimulating a photosensor
- - Wide detection range of 20 m²
